

BLOCK PAVING SEALER

Lasting protection for block paved driveways and patios

Smartseal Block Paving Sealer can be applied by roller or sprayer and provides a highly protective barrier to slow down surface wear and deterioration of block paved surfaces.

It will also inhibit the growth of weeds in the sand filled joints between the pavers and help to reduce ongoing maintenance.

KEEPING BLOCK PAVING LOOKING LIKE NEW

Block paving is one of the most widely laid surfaces in the UK, it is also one of the most difficult to keep looking neat and tidy. It can look great when first laid, but the soft sand filled joints between the pavers can often become the perfect environment for weeds to grow and become established. Block paving is also very porous and susceptible to moss and algae growth as well as lacking resistance to staining from oil leaks.

Smartseal Block Paving Sealer can help to keep block paved patios and driveways looking like new by protecting the surface from deterioration and staining as well as solidifying the sand in the joints between the pavers to prevent weed growth. It is supplied in a variety of finishes as a solvent or 'solvent free' formulation as well as a urethane sealer generally specified for commercial applications.

Benefits of Block Paving Sealer:

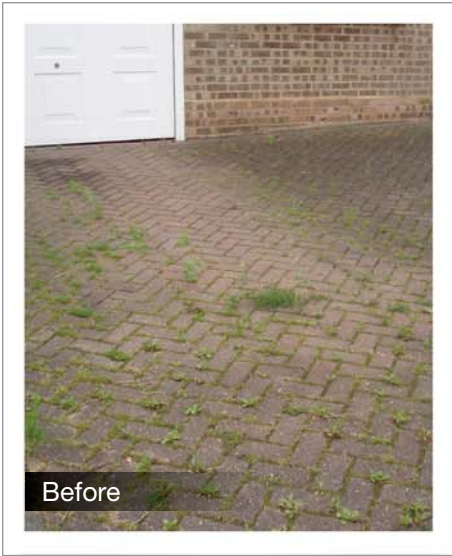

UNTREATED

- Loss of colour
- Growth of moss, algae and lichen
- Weeds in joints
- Hard to maintain
- Oil Stains

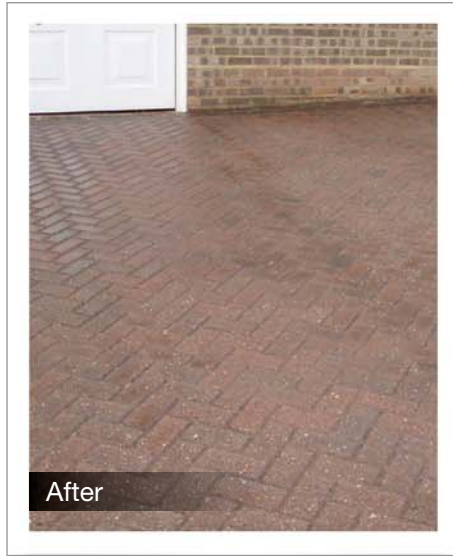

TREATED

- Restores original finish
- Water resistant
- Helps prevent colour loss
- Protects against staining
- Durable Finish

After

RESTORING THE ORIGINAL LOOK OF BLOCK PAVED SURFACES

Block paving has always been a popular choice for homeowners in the UK when selecting a surface for a driveway or patio. However, it can rapidly deteriorate in the space of a few years as weeds will quickly grow in the soft sand between the pavers. Cars going back and forth can also create a build up of dirt, oil and grime to form stains on the surface that can make block paved driveways look quite unsightly. Its because of these problems that unsealed block paving will always need regular maintenance to keep it looking good at all times.

Smartseal Block Paving Sealer should be applied by brush, roller or sprayer to a dry surface. The block paving sealer will solidify the sand between the joints of the pavers, making it much more difficult for weeds to grow. This will reduce ongoing maintenance by keeping it free from weeds and making it much easier to remove oil stains.

ADVANCED SEALING TECHNOLOGY

Smartseal Block Paving Sealers are specially formulated to create water and oil resistant barriers on all types of block paved surfaces.

The sealers provide lasting protection from weathering and deterioration as well as weed growth which is a common problem with block paving.

Smartseal Block Paving Sealer solidifies jointing sand between block pavers to create a strong bond.

KEY FEATURES:

Hard Wearing
Slows down surface degradation

Professional Application
Available from Registered Contractors

Moss & Algae Resistant
Inhibits the growth and spread of moss and algae

Stain Resistant
Easier to remove oil leaks and grease stains

Saves Money
By reducing ongoing maintenance costs

Prevents weed growth
By solidifying jointing sand between the pavers.

*"Superb product!
I applied a few coats and it totally transformed by drive.
Highly recommended.
Smartseal provided great advice on the product and application process."*
