

MASONRY CREAM

Lasting protection for Brickwork, Stone and Masonry

Climashield® Masonry Cream provides lasting protection for masonry and brickwork from weathering and erosion. Only one coat is necessary to provide protection for up to 20 years.

It is quick and easy to apply and prevents water penetrating into the pores of brickwork and masonry. Once dry the cream is invisible and will not alter the aesthetic appearance of a building.

PROTECTING MASONRY AND BRICKWORK FROM PENETRATING DAMP

Buildings are constantly exposed to the elements which, over time, can result in general surface erosion and deterioration. Most types of brickwork will also lack resistance to water ingress and retain high levels of moisture, often resulting in lower temperatures within a building. Climashield® Masonry Cream will protect a home or building from penetrating damp as well as helping to save energy and money by increasing its thermal efficiency. It comes with a 15 year guarantee but can provide protection for up to 20 years.

Benefits of Climashield® Masonry Cream:

PROTECTED

- ✓ Energy saving
- ✓ 'Self-cleaning' effect
- ✓ Reduced maintenance costs
- ✓ Prevents damp penetration
- ✓ Inhibits mould & algae growth
- ✓ Walls repel water
- ✓ UV Resistant

UNPROTECTED

- Damp walls from water ingress
- Higher energy bills from poor thermal efficiency
- Mould and algae growth
- Damage from freeze - thaw cycle

Unprotected Brickwork or Masonry, will easily absorb moisture which can stay there for a long time before it can dry out. When freeze and thaw conditions exist, this trapped water can expand causing cracking, spalling and lasting damage to the substrate.

'Energy saved can return any investment within 5-7 years'

ClimaShield®
Masonry Cream

LONG-LASTING PROTECTION FOR BRICKWORK, MASONRY AND NATURAL STONE

Climashield® Masonry Cream is ideal for all property types where retaining the exterior look is of high importance, such as listed and historical buildings and homes in conservation areas.

KEEPS BUILDINGS DRY AND FREE FROM PENETRATING DAMP

Climashield® Masonry Cream is a high quality waterproofing cream that, after application, ensures long-lasting water repellency to walls. It will also provide protection against efflorescence, mould and frost as well as damage caused by pollutants.

When walls get wet the thermal efficiency will start to fall quite quickly and valuable heat can be lost by heat transference from inside to out. Climashield® Masonry Cream will prevent rain penetrating into brickwork or masonry and is proven to reduce heat loss, providing an energy saving of up to 18-20% after one application. Surfaces treated with Climashield® Masonry Cream will also benefit from improved thermal performance by reducing the amount of heat lost through "wet" walls.

SUITABLE FOR ALL TYPES OF PROPERTIES OLD OR NEW

Climashield® Masonry Cream is suitable for use on masonry, brickwork, natural stone, render, concrete and limestone walls in the residential and commercial sector. It is frequently used on new build homes as homeowners are looking to protect their investment.

KEY FEATURES:

Weather Resistant

Protects masonry, brickwork and natural stone against surface erosion, especially in coastal areas.

Moss & Algae Resistant

Inhibits the growth of mould and fungi on walls to keep them clean and looking like new, reducing ongoing maintenance costs.

Saves Energy and Money

Insulates and lowers heating bills.

Professional Application

By Registered Contractors.

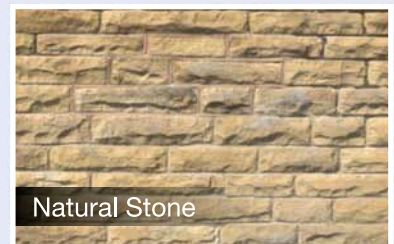

15 year guarantee

For long-term peace of mind.

Environmentally Friendly

Climashield® is water based, non-toxic, VOC free and safe to use.

"I sealed a customer's house 100 yards from the sea that suffered from damp and leaks in heavy rain. Now he is delighted and no longer has damp even after recent storms."

PATRICK OLIVER, BRILLIANT DRIVEWAY CLEANERS
